

## Working with Procedure Builder

## Objectives

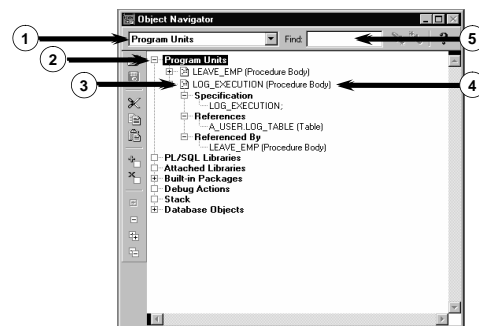

After completing this lesson, you should be able to do the following:

- Describe the features of Procedure Builder
- Manage program units using the Object Navigator
- Create and compile program units using the Program Unit Editor
- Invoke program units using the PL/SQL Interpreter

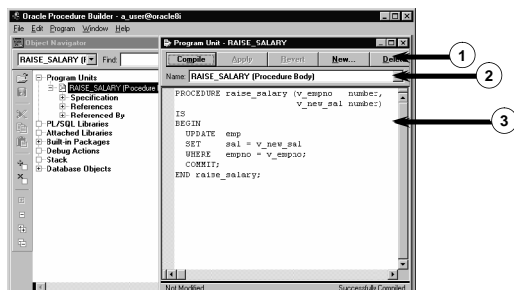

## Components of Procedure Builder

Component	Use It to ...
Object Navigator	Manage PL/SQL constructs; perform debug actions
PL/SQL Interpreter	Debug PL/SQL code; evaluate PL/SQL code in real time
Program Unit editor	Create and edit PL/SQL source code
Stored Program Unit editor	Create and edit server-side PL/SQL source code.
Database Trigger editor	Create and edit database triggers

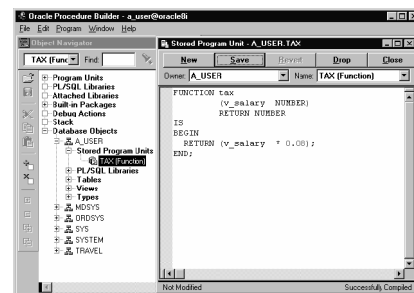

## Procedure Builder Components: The Object Navigator

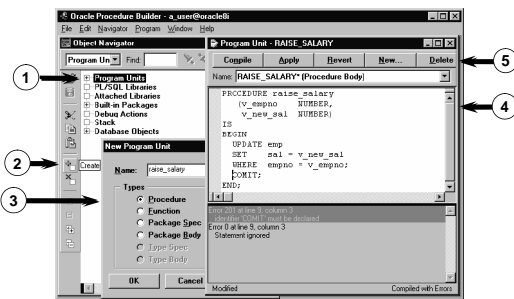

## Procedure Builder Components: The Program Unit Editor

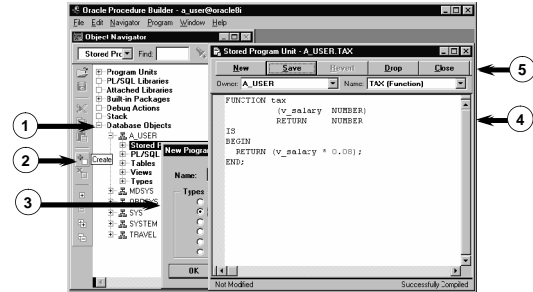

## Procedure Builder Components: The Stored Program Unit Editor

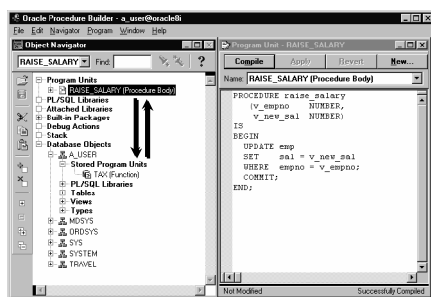

### Creating a Client-Side Program Unit

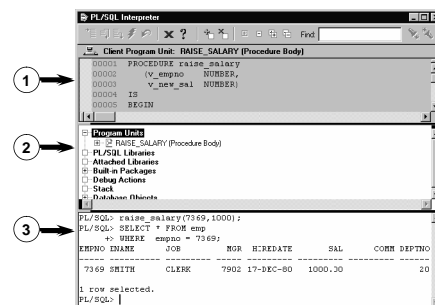

### Creating a Server-Side Program Unit

### Transferring Program Units Between Client and Server

### Procedure Builder Components: The PL/SQL Interpreter

### Procedure Builder Built-in Package: TEXT\_IO

- **TEXT\_IO package:**
  - Contains a procedure **PUT\_LINE**, which writes information to the PL/SQL Interpreter window
  - Is used for client-side program units
- **TEXT\_IO.PUT\_LINE:**
  - Accepts one parameter

```
PL/SQL> TEXT_IO.PUT_LINE(1);
```
